

Welcome to Your Advanced Excel Course

Boost Your Skills - Upgrade Your Career

COURSE WELCOME E-KIT

This e-kit gives you everything you need before your first class: course roadmap, learning outcomes, preparation checklist, project expectations, attendance tips, and support details.

Mode: Classroom + Online support available

Best For: Students, working professionals, MIS executives, accounts teams, and business owners

Outcome: Build confidence in formulas, dashboards, reporting, and automation-ready Excel workflows

A Warm Welcome

Dear studentNameField,

Welcome to Expert Computer Academy. You have taken a smart step toward building a practical, job-ready Excel skill set. This course is designed to help you move beyond basic spreadsheet work and start using Excel for analysis, reporting, dashboards, and real business decision-making.

By the end of this course, you should be able to work faster, avoid common data errors, create meaningful reports, and present information clearly using formulas, pivot tables, charts, and dashboards.

What You Will Gain

- Confidence in advanced formulas and lookup functions
- Ability to clean, validate, analyze, and present business data
- Hands-on practice through MIS reporting and real-time projects
- Dashboard-building skills for interviews, office work, and freelancing
- A stronger professional profile for admin, operations, finance, HR, sales, and analytics roles

Excel is not just a software skill - it is a workplace productivity skill. Learn it well, and you save time every single day.

Course Curriculum Roadmap

Module 1	Excel Productivity Basics Workbook setup, formatting discipline, data structure, shortcuts, and clean spreadsheet habits.
Module 2	Advanced Formulas & Functions IF, nested IF, VLOOKUP, HLOOKUP, INDEX-MATCH, logical functions, text/date functions, and error handling.
Module 3	Data Cleaning & Validation Remove duplicates, text-to-columns, data validation rules, dropdowns, protected sheets, and clean data entry.
Module 4	Pivot Tables & Pivot Charts Summarize large data, slicers, filters, grouping, calculated fields, and visual summaries.
Module 5	Data Analysis & Dashboards KPI cards, charts, conditional formatting, dashboard layout, and report storytelling.
Module 6	MIS Reporting & Real-Time Projects Sales report, attendance report, fee/reporting tracker, business dashboard, and interview-style tasks.

Practical Focus: Every topic should be practiced using real tables, sample business data, and reporting tasks so learners can apply the concepts immediately.

Learning Outcomes

Work faster

Use shortcuts, structured data, templates, and reusable formats.

Find answers quickly

Use lookup formulas and pivot tables to convert raw data into useful summaries.

Reduce mistakes

Apply data validation, conditional formatting, and error-checking practices.

Create reports

Build MIS reports, KPI summaries, charts, and clean dashboards.

Present professionally

Format reports in a way that is easy to read and decision-ready.

Prepare for interviews

Explain formulas, pivot reports, dashboards, and Excel problem-solving clearly.

Mini Portfolio Projects You Can Build

- Sales Performance Dashboard
- Student Fee Tracking Report
- Attendance Analysis Sheet
- Inventory or Stock Summary
- Monthly MIS Report with Pivot Charts

Before Your First Class

Use this checklist to come prepared and get maximum value from every session.

- ☐ Install Microsoft Excel on your laptop or desktop. Microsoft 365 or Excel 2016+ is recommended.
- ☐ Bring a notebook or digital notes app for formulas, shortcuts, and project steps.
- ☐ Create a folder named Advanced Excel Practice to save class files and assignments.
- ☐ Practice typing basic formulas like SUM, AVERAGE, COUNT, IF, and VLOOKUP before class.
- ☐ Keep your phone charged for updates, shared files, and class communication.
- ☐ Ask questions during practice - Excel improves fastest when doubts are solved immediately.

Recommended Learning Discipline

Daily practice	20-30 minutes after every class
Weekly revision	Revise formulas + pivot reports once a week
Project habit	Save every class task as a portfolio sample
Doubt clearing	Ask doubts before moving to the next module

Class Guidelines & Support

During Class

- Join on time and keep your practice file open
- Follow the instructor step by step before trying shortcuts
- Do not skip hands-on practice tasks
- Ask doubts when a formula or step is unclear

After Class

- Complete the given practice sheet
- Save your work with proper file names
- Revise the formula logic, not just the final answer
- Share doubts with screenshot or file reference

Support Details

Phone	7282983335 9128812325
Address	Kumar Tower, 2nd Floor, Boring Rd Crossing, Patna-800001, Bihar
Online Course	Online courses also available
Academy	Expert Computer Academy - 38 Years of Excellence

Starter Formula Cheat Sheet

Keep this page handy during the first few sessions. The instructor will explain syntax and use cases with practice data.

Formula	Purpose	Example
SUM	Adds numbers in a range	=SUM(A2:A20)
AVERAGE	Finds average value	=AVERAGE(B2:B20)
COUNT / COUNTA	Counts numeric / non-empty cells	=COUNT(A2:A20)
IF	Returns result based on condition	=IF(C2>=50,"Pass","Fail")
VLOOKUP	Searches vertically in a table	=VLOOKUP(E2,A:D,3,FALSE)
INDEX-MATCH	Flexible lookup combination	=INDEX(C:C,MATCH(E2,A:A,0))
TEXT	Formats numbers/dates as text	=TEXT(A2,"dd-mmm-yyyy")
IFERROR	Handles formula errors cleanly	=IFERROR(VLOOKUP(E2,A:D,2,0),"Not Found")

Tip: Do not memorize formulas blindly. Understand what problem each formula solves, then practice it on 5-10 different examples.

Your 30-Day Excel Growth Plan

Timeline	Focus Area
Week 1	Basics polish + formatting + formulas practice
Week 2	Lookup functions + data validation + conditional formatting
Week 3	Pivot tables, pivot charts, slicers, and report summaries
Week 4	Dashboard creation + MIS project + interview revision

Final Message

Excel becomes powerful when you practice consistently. Attend each session, complete your assignments, and build your own mini project. Your goal is not only to finish the course - your goal is to become confident enough to use Excel in real work.

Ready to begin? Save this e-kit, attend your first class, and start building your Excel confidence from Day 1.
